Overview

Ambarella's CV25S SoC combines state-of-the-art computer vision technology with image processing in a single, low-power design. Fabricated using advanced 10 nm process technology, CV25S achieves an industry-leading combination of low power and high performance in both human and computer vision applications.

Meeting the demands of the next generation of intelligent IP cameras, CV25S's CVflow[®] architecture provides deep neural network (DNN) computer vision processing and 4KP30+ video encoding, enabling a multitude of computer vision applications on the edge. Efficiently encoding in both AVC and HEVC video formats, CV25S minimizes cloud storage costs by streaming high-resolution video at low bit rates.

To further enhance its computer vision capabilities, CV25S uses a next-generation image signal processor (ISP) to deliver outstanding imaging in low-light conditions, while its high dynamic range (HDR) processing extracts maximum image detail in high-contrast scenes.

CV25S includes a suite of advanced cybersecurity features such as secure boot with TrustZone[®] and secure memory, true random number generator (TRNG), one-time programmable memory (OTP), DRAM scrambling and virtualization, and a programmable secure level for each peripheral interface. To help customers easily port their own neural networks onto the CV25S SoC, Ambarella's software development kit offers a complete set of tools.
